SKILLABOARD

In summary

SkillaBoard is a cloud platform with a dedicated APP that allows you to design, organise and manage interactive classrooms or events through tools that amplify training.

What is it?

Above all, SkillaBoard is a technological solution designed to "amplify the classroom and equip it with super powers" to make it constructive, interactive and engaging.

It consists of a delivery and design environment for the trainer or instructor and a participation environment for learners that is used during live interaction.

SkillaBoard consists of:

- **Composer**: the platform for designing and organising the classroom or the training event
- **Viewer**: the tool for viewing content
- **Remote**: the participation app for learners/participants

What is it for?

SkillaBoard has been designed to:

- open classrooms and training events to a new dimension
- manage and optimise training times as best as possible
- increase participant interaction and make them an active part of the training experience
- create real-time interaction
- provide content and receive contributions, questions and suggestions interactively and through participation

Using SkillaBoard it is possible to:

• simplify the design of shorter and more focussed classrooms and events
• innovate classrooms and events
• interact with participants in real time
• manage and optimise training times
• deliver content and receive contributions, questions and suggestions interactively and through participation
• archive the training activity in the cloud
