E-LEARNING ENVIRONMENTS

In brief

Online environments dedicated to distance learning, enriched by courses of a technical (new laws, regulations, technical procedures) and behavioural nature, whose content can be encoded in a strict manner. Flexible, customisable, also in terms of time, reusable.

What is it?

Effective and simple to use online environments for e-learning and social networking. Streamlined and usable, they are places of pleasant, interactive, engaging online courses, with a high education function and high-impact graphics.

Starting from the technological base of Moodle, content and e-learning environments are designed which take care of the education of the internal training staff, in order for them to be able to manage the organisational and cultural changes that are necessary at the start of e-learning and to make them autonomous in all the phases of the process: from managing the platform to the creation of courses.

What is it for?

- developing personalised platforms, coherent with the company's culture and organisational models, already populated with content
- guaranteeing brevity, edutainment and maximum involvement
- supporting the development of a truly blended training and self-training
