ADAPTIVE LEARNING

In brief

The term for instruments and methodologies used to personalize the educational experience and learning (as for contents and their representation) based on users.

What is it?

Adaptive Learning is a methodology which supplies users with the best learning experience by taking advantage of technologies which adjust education to the users' needs.

Every single person is unique: they have their own knowledge standards, abilities, different learning modes and processes. The personalization of the learning path contents improves performances.

What is it for?

- to personalize the educational syllabus based on the needs and personal abilities of users
- to increase the involvement and improve the overall performance
- to enable users to learn more efficiently and better understand the subjects dealt with
