DIGITAL COMPETENCIES

In brief

Basic skills required to deal with difficulties and to manage change. Web 2.0 skills that are useful for bridging the digital divide which is often present among company employees (for example, the search for information, organising and sharing that information, social networks).

What is it?

Digital skills are vital for dealing with difficulties and managing change. For this reason, they are essential courses of communication/education aimed at developing Web 2.0 skills and at bridging the digital divide that is often present among company employees, as well as accompanying employees to explore the potentiality of Web 2.0 (what it is, what it's for, its tools).

What is it for?

- refining methods for the search, organisation and sharing of information
- educating in the use of social networks
- becoming familiar with Web 2.0
