

INNOVATIVE CLASSROOMS

In brief

They break the traditional model of eight hours in the classroom with the traditional teacher, developing innovative models that can be short classes of only one hour or exclusively experiential classes as the theoretical part is left to e-learning.

What is it?

The classroom evolves; it doesn't disappear but it is renewed. This evolution begins from a substantial reduction in the time devoted to the classroom. For this reason, many of the courses of these innovative classrooms integrate person-to-person training with online training (blended) and are supported by Visual Thinking, Prezi and other creative modalities.

Less classroom, therefore, but higher quality: less theory, more experientialism, online training and self-education.

What is it for?

- creating innovative training
- encouraging direct experience rather than mere rote learning
